

Project Design Phase – Proposed Solution Template

Project Name: ComplaintEase – Advanced Complaint Management Platform

S.No	Parameter	Description
1	Problem Statement	Organizations often manage complaints through emails, paper forms and phone calls, resulting in delayed resolutions, poor tracking, lack of transparency and reduced customer satisfaction.
2	Idea / Solution Description	ComplaintEase is a centralized MERN-based complaint management platform that enables complaint registration, AI-powered categorization, status tracking, real-time notifications, analytics and reporting.
3	Novelty / Uniqueness	AI-based complaint categorization, Socket.io real-time updates, role-based access control, audit logs, analytics dashboards and cloud-based document management.
4	Social Impact / Customer Satisfaction	Improves transparency, accountability and communication while reducing complaint resolution time and increasing user satisfaction.
5	Business Model	Software-as-a-Service (SaaS) subscription model for universities, municipalities, enterprises and organizations.
6	Scalability of the Solution	Built on the MERN stack and cloud infrastructure, supporting multi-tenant deployment, high user volumes and future mobile applications.
